

KGT

Utensile Multifunzione per Scanalatura e Troncatura ad Alta Precisione

Ottimo controllo truciolo

Ottime prestazioni su varie tipologie di lavorazione

KGT

Le lavorazioni di scanalatura sono utilizzate in diverse applicazioni e, di recente, è emersa la necessità di utensili che garantiscano prestazioni stabili anche nelle lavorazioni ad alta velocità e ad alta precisione, per aumentare la produttività.

Gli utensili per scanalatura sottili e lunghi sono soggetti a usura, a scheggiature e a rotture a causa delle vibrazioni generate durante le lavorazioni ad alta velocità e ad alta precisione.

Gli inserti KTG sono dotati di un design dal tagliente rinforzato e di un trattamento di alta qualità che protegge il tagliente e assicura prestazioni stabili in diverse condizioni di lavorazione.

I portautensili KTG garantiscono un'elevata stabilità di lavorazione e una lunga durata dell'utensile, riducendo le vibrazioni al minimo grazie a un robusto sistema di serraggio. La linea KGT offre un'ampia gamma di inserti e portautensili adatti a scanalatura, taglio, tornitura, profilatura e lavorazione in rilievo e fornisce ai clienti soluzioni di lavorazione ottimali.

» **Buon controllo del truciolo**

- Ampia gamma di rompitruccioli disponibile

» **Sistema di serraggio stabile**

- Vibrazioni minimizzate

» **Ottime prestazioni**

- Ottima finitura superficie e alta precisione

» **Ampia gamma**

- Soluzioni disponibili per ogni esigenza

 **Codifica**

Guida alla scelta dei gradi

NC3225

P M K N S

Grado CVD
Per Acciai generici e forgiati
Alta velocità, resistenza all'usura

NC6315

P M K N S

Grado CVD
Per Ghisa Grigia e Duttile
Lavorazioni generiche
Previene la comparsa di bava e scheggiature

NC5330

P M K N S

Grado CVD
Uso universale
Stabile nelle lavorazioni ad alta velocità

PC3035

P M K N S

Grado PVD
Specifico per scanalatura di Acciaio
Buona resistenza all'usura
Stabile nelle lavorazioni ad alta velocità

PC5300

P M K N S

Grado PVD, Universale
Per taglio interrotto
Buona resistenza all'usura

PC9030

P M K N S

Grado PVD
Per sgrossatura con taglio interrotto di INOX
Buona resistenza alle scheggiature e alle saldature

Materiale	INOX (X5CrNi18-9)
Parametri	vc(m/min) = 120, fn(mm/giro) = 0.12, ap(mm) = 5.0, con acqua
Utensile/Inserto	Inserto KGMN400-03-R (PC5300) Utensili KGEHR2525-4-T15

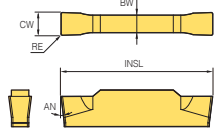

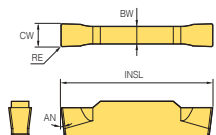

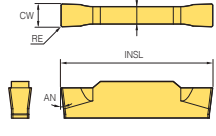

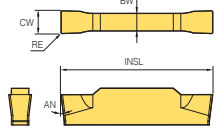

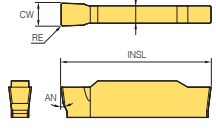

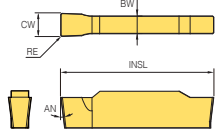

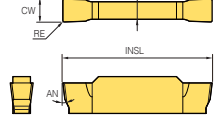

Sede Turbina

Materiale	HRSA (Inconel718)
Parametri	vc(m/min) = 30, fn(mm/giro) = 0.04, ap(mm) = 8.5, con acqua
Utensile/Inserto	Inserto KGMN500-08-TL (UPC810) Utensile KGEHR3232-5-T20

Serraggio Inserto

① Inserire il pin della chiave nel foro della lama

② Fissare l'inserto nella sede dopo aver girato la chiave di 45°~160° per allentare la sede

①⇒② Rotation: Release
②⇒① Rotation: Conclusion

③ Estrarre la chiave dopo averla mossa nella posizione originale e terminare il serraggio

⚠ For the safe metalcutting

- Use safety supplies such as protective gloves to prevent possible injury while touching the edge of tools.
- Use safety glasses or safety cover to hedge possible dangers. Inappropriate usage or excessive cutting condition may lead tool's breakage or even the fragment's scattering.
- Clamp the workpiece tightly enough to prevent its movement while its machining.
- Properly manage the tool change phase because the inordinately used tool can be easily broken under the excessive cutting load or severe wear, and it may threat the operator's safety.
- Use safety cover because chips evacuated during cutting are hot and sharp and may cause burns and cuts. To remove chips safely, stop machining, put on protective gloves, and use a hook or other tools.
- Prepare for fire prevention measures as the use of the non-water soluble cutting oil may cause fire.
- Use safety cover and other safety supplies because the spare parts or the inserts can be pulled out due to centrifugal force while high speed machining.
